

Action plan – what to do if you are ill or are suspicious of corona virus infection?

1. Immediately inform your team leader.
2. You or your Team leader should immediately get in contact with the responsible person for Covid19 from Organizing Committee, **Jasmina Simler (phone nr. +386 70 849 905)**
3. The visit from OC medical doctor will be arranged doing the following steps:
 - A. Rapid Antigen Test => if the RAT is negative, the doctor checks on the respective person the day after again. Depending on the clinical symptoms, the doctor may decide to do the PCR test instead of RAT.
Antigen Test => if the Antigen Test is positive, the doctor makes a PCR test and person has to stay in isolation at least until the result of the PCR test is known.
 - B. PCR Test => if the PCR Test is negative, observation and potential follow up tests the days after can be done based on the doctor's decision.
PCR Test => if the PCR Test is positive, person has to stay in isolation.

In case of a positive test, close contacts will be identified and tested with Rapid Antigen Tests.

Once tested positive (RAT or PCR test), the respective person must stay in isolation until further doctor's instructions.
